

TASK 03

PRODUCT ROADMAP

Feature

AI-Based Parking Prediction

Product Vision

To become the most reliable parking assistance platform in urban areas.

Business Objective

- Increase active users
- Improve customer satisfaction
- Reduce parking search time

MoSCoW Prioritization

Must Have :

- Live parking tracking
- Parking availability prediction
- GPS integration
- User login system

Should Have :

- Reservation feature
- Payment gateway
- Push notifications

Could Have :

- Voice navigation
- Parking history

Won't Have :

- Autonomous parking assistance

3-Month Timeline

Month 1 – Research & Planning

Week 1 :

- User interviews
- Problem validation

Week 2 :

- Competitor analysis
- Market research

Week 3 :

- Requirement gathering

Week 4

- Wireframes and prototypes

Month 2 – Development

Week 5

- Database setup

Week 6

- API development

Week 7

- AI prediction engine

Week 8

- Frontend implementation

Month 3 – Testing & Launch

Week 9

- Internal testing

Week 10

- User acceptance testing

Week 11

- Bug fixing

Week 12

- Public release

Milestones

- Milestone 1 : Research Completed
- Milestone 2 : Prototype Ready
